Subject: EPA results letters for retesting of Belmont drinking water wells

Sara, Mark, and Brian

EPA has recently conducted testing of private wells that were initially tested by WWW. While the analytical results are still undergoing validation, letters to the residents with the results have been drafted. You will have an opportunity to review the letters before they are released. Since the intention is to have Kent County Health Department to be the point of contact for health questions, EPA wanted to find out who from KCHD should be included in the letter (name, phone number, email). Jeff Kimble is the Superfund On-Scene Coordinator who has led the sampling effort. Let us know if you have any questions.

Mark
